QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

Certain Detailed information Relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Persons Vaccinated, &c., &c., &c.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
Messrs. EASON & SON, LTD., 40-41 LOWER O'CONNELL STREET, DUBLIN.

Price Sixpence Net.

Marriages :—OCT., NOV., DEC., 1928.

Births and Deaths :—JAN., FEB., MARCH, 1929.

OIFIG UM CHIÁRÚ GHENEREÁLTA,

TIGH AN CHUSTUIM,

BAILE ÁTHA CLIATH.

During the quarter ended 31st March last, there were registered in Saorstát Éireann, comprising 641 Registrars' Districts, 14,212 Births, equivalent to an annual rate of 19.3 per 1,000 of the estimated population, and 13,966 Deaths, affording an annual rate of 19.0 per 1,000 of the estimated population in the middle of 1929, viz., 2,943,000 persons. It should be borne in mind that the information regarding Births and Deaths registered during the quarter contained in this Report is unrevised. The Annual Report for 1929 will supply the revised figures.

In Northern Ireland, for the quarter, the Births registered were equal to an annual rate of 20·2 per 1,000 of the population, in England and Wales to 16·5 per 1,000, and in Scotland to 19·4 per 1,000.

In the same period the deaths registered in Northern Ireland were equivalent to an annual rate of 24·7 per 1,000 of the population, in England and Wales to 21·0 per 1,000, and in Scotland to 21·9 per 1,000.

MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the fourth quarter of 1928, was 3,142, equivalent to an annual rate of 4·3 per 1,000 of the estimated population, this rate being 0·1 above that for the corresponding quarter of 1927, and equal to the average for the fourth quarter of the preceding ten years. Of the total number of marriages 2,957 (or 4·3 per 1,000 of the estimated Roman Catholic population) were those of Roman Catholics, and 185 related to persons belonging to all other denominations, representing 3·4 per 1,000 of the estimated population other than Roman Catholics. The Marriage rate among Roman Catholics is equal to, and that relating to all other denominations is 0·6 below, the average for the fourth quarter of the ten years 1918-27.

BIRTHS.

Of the Births registered (14,212) during the quarter ended 31st March last, 7,222 were boys and 6,990 girls, the total being equivalent to an annual rate of 19·3 per 1,000 of the estimated population. This rate is 1·2 below the average for the first quarter of the preceding ten years, and 0·5 below that for the first quarter of 1928.

DEATHS.

The Deaths registered during the quarter numbered 13,966, of which 6,927 were of males and 7,039 of females, and are equivalent to an annual rate of 19·0 per 1,000 of the population, being 0·9 above the average for the first quarter of the preceding decennium, and 1·9 above the rate for the first quarter of the year 1928.

CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in Saorstát Éireann from the undermentioned causes for the first quarter of 1929, and for each of the eight preceding quarters, also averages for the first quarter of the five years, 1924-28.

| PERIOD. | Total Deaths registered. | Deaths from Principal Epidemic Diseases. | | | | | | | | | | | Deaths from Tuberculous Disease. | | Deaths from Cancer. | |

* Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

† The rates for Saorstát Éireann, Dublin County, and Dublin County Borough are calculated on the estimated population in the middle of 1929; those for the other areas on the population according to the Census of 1926.

AGES AT DEATH.—Of the 13,966 deaths registered during the quarter, 1,257, or 9.0 per cent., were those of infants under 1 year of age; and 6,774, or 48.5 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 88 per 1,000 births registered, as compared with 61, 56, and 69, for the three preceding quarters.

INQUESTS.—There were 299 Inquests reported to the Registrars during the quarter, this number being equal to one in every 47 of the total deaths registered.

DEATHS IN PUBLIC INSTITUTIONS.—Of the 13,966 deaths registered, 3,365, or 24.1 per cent., occurred in public institutions.

UNCERTIFIED DEATHS.—The Returns furnished by the Registrars show that 3,426, or 24·5 per cent., of the deaths registered during the quarter were uncertified, there having been no medical attendant during the last illness.

VACCINATION.—As returned by the Registrars, the number of Successful Primary Vaccinations during the quarter ended 31st March last was 7,415.

URBAN DISTRICTS.

Table II, page 9, gives separate information for the Urban Districts. It will be observed from this Table that the birth-rate relating to the quarter under review for the entire urban districts, which contain 29 per cent. of the population of Saorstát Éireann, was 22·8 per 1,000 of the population, and that the birth-rate for the remainder of Saorstát Éireann was 17·9 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas, during the quarter, was 21·4 per 1,000 of the population, and for the remainder of Saorstát Éireann the corresponding rate was 18·0 per 1,000.

The urban mortality from the principal epidemic diseases* recorded during the quarter was equivalent to an annual rate of 0·9 per 1,000 of the population of the urban districts, the death rate from these diseases for the remainder of Saorstát Éireann being 0·3 per 1,000 of the population.

ELEVEN PRINCIPAL TOWN DISTRICTS.

As shown in Table II, the annual rate represented by the deaths from all causes during last quarter recorded for the Dublin Registration Area and ten of the principal urban areas of Saorstát Éireann was 22·3 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Sligo, 10·8; Tralee, 16·3; Dundalk, 16·9; Wexford, 17·2; Kilkenny, 20·3; Galway, 21·1; Cork, 21·3; Limerick, 21·6; Dublin Registration Area, 23·2; Waterford, 23·7, and Drogheda, 24·9.

The annual rate represented by the deaths from the principal epidemic diseases* in the 11 districts was 1·0 per 1,000 of the population, the rates varying from 0·3 in Sligo and Galway to 3·9 in Waterford, the 158 deaths from all causes for that district including 3 from measles, 15 from whooping-cough, and 8 from diarrhoea and enteritis of children under 2 years of age.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 11 towns in the aggregate was 1·86 per 1,000 of the population; for the Dublin Registration Area, it was 1·95 per 1,000 (the rate for Dublin City being 2·11 per 1,000), and for the remaining ten town districts collectively it was 1·67.

DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the total number of births registered during the quarter ended 31st March, 1929, was 2,893—1,484 boys and 1,409 girls—being equal to an annual rate of 27·3 in every 1,000 of the population.

The births recorded for the City numbered 2,151, equivalent to an annual rate of 26·9 in every 1,000 of the population; and for the urban districts named above, 488, equal to an annual rate of 18·8 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 254 in institutions relating to residents of outside localities) amounted to 2,639, affording an annual rate of 24·9 per 1,000.

DEATHS.—Omitting the deaths referred to localities outside the Dublin Registration Area, and including the deaths of residents of the Area registered elsewhere in Saorstát Éireann, the deaths for the Area numbered 2,456, and were equivalent to an annual rate of 23·2 per 1,000 of the population, the average rate for the corresponding period of the previous 10 years being 21·4.† The total number of deaths registered in the Dublin Registration Area during the quarter ended 31st March, was 2,622—1,223 males and 1,399 females—affording an annual ratio of 24·7 in every 1,000 of the population, as compared with 23·2 per 1,000 for the first quarter of the ten years, 1919-1928.

The number of deaths of inhabitants of the City of Dublin was 1,896, equivalent to a rate of 23·7 per 1,000. For the urban districts the number was 560, being equal to an annual death rate of 21·5 in every 1,000.

* See note (*) on page 3.

† This figure is not strictly comparable with that for 1929, as it is only partially corrected for deaths in Institutions

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter ended 31st March, 1929, as compared with the average for the first quarter of the five years, 1924-28.*

| Causes of Death. | Deaths, 1st Quarter, 1929. | Averages, 1st Quarter, 1924-28.* |
|---|----------------------------------|--|
| Enteric Fever | 2 | 3 |
| Typhus | 1 | . |
| Smallpox | . | . |
| Measles | 2 | 43 |
| Scarlet Fever | 4 | 7 |
| Whooping-cough | 16 | 40 |
| Diphtheria | 23 | 19 |
| Diarrhœa and Enteritis of Children under 2 years ... | 29 | 40 |
| Influenza | 183 | 102 |
| Tuberculosis | 241 | 224 |

The annual rate represented by the mortality from the principal epidemic diseases† in the Dublin Registration Area was 0·7 per 1,000, in the City it was 0·8, and in the Urban Districts, 0·4.

AGES.—Of the 2,456 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 506 were under five years of age, including 327 infants under one year of age, the latter representing a rate of 124 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 45·1 in every 1,000 children of that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 3·3 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 5·5 per 1,000, the total number under 25 years being equal to an annual mortality of 13·5 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 9·7; for those between 45 and 65 it was 33·4; among persons between 65 and 75 the rate was 111·3, and among those aged 75 and upwards the annual death rate was 221·9 per 1,000. The deaths of 26 persons (8 males and 18 females) aged 90 years and upwards were registered.

PUBLIC INSTITUTIONS.—Of the 2,456 deaths of residents of the Dublin Registration area, recorded during the quarter, 991, or 40·4 per cent., occurred in public institutions, viz., 624 in the various hospitals, prisons, and lunatic asylums in the Area, 292 in the Dublin Union Workhouse, and 75 in institutions situated in other localities.

ENGLAND AND SCOTLAND.

During the thirteen weeks ended 30th March, 1929, the births in London were equivalent to a rate of 16·3 per 1,000 of the population; in Glasgow the birth rate was 22·4 per 1,000, and in Edinburgh 17·8 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 24·1 in every 1,000 of the civil population; in Glasgow the death-rate was 27·9 per 1,000 of the total population, and in Edinburgh the annual rate was 21·2 per 1,000.

* These figures are not strictly comparable with those for 1929, as they are only partially corrected for deaths in Institutions.

† See note (*) on page 3.

METEOROLOGY.

The mean temperature for the thirteen weeks ended 30th March, 1929, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 40.2° ; at Peamount Sanatorium it was 40.6° *; at Cork (Roche's Point) it was 44.0° ; at Greenwich, 36.9 ; at Glasgow, 37.4° ; and at Edinburgh, 38.1° .

The mean daily number of hours of bright sunshine recorded at Dublin was 2.9; at Cork (Ballinacurra), 2.5; at Greenwich, 2.6; at Glasgow, 1.8; and at Edinburgh, 3.2.

The rainfall at Dublin during the thirteen weeks measured 3.58 inches; at Peamount Sanatorium, 3.67 inches; at Cork (Roche's Point), it was 11.06 inches; at Greenwich, it was 1.43 inches; at Glasgow, 3.53 inches; and at Edinburgh, 1.87 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

JANUARY.

January, 1929, was, on the whole, quiet, cold and relatively dry, with a conspicuous paucity of south-westerly to westerly winds. The first week was decidedly cold, with occasional falls of snow; at Markree Castle a screen minimum temperature of 7°F. was recorded on the 1st. Mild, rainy weather prevailed about the 10th, 19th and during the last three days of the month, temperature rising well above 50°F. on the 30th and 31st and reaching 62°F. in Dublin (Glasnevin) on the 30th. Low screen temperatures and ground frost occurred frequently at night. In all districts the mean temperature for the month was below the normal. Rainfall totals were decidedly below the normal in all districts; at Killarney the month's total amounted to only 22 per cent. of the normal. Sunshine aggregates were in general above the normal in the western districts, and below the normal elsewhere.

FEBRUARY.

The first few days of February were mild, with much rain during the night of the 1st-2nd. Heavy rain again occurred on the 5th and 6th, and up to the 12th a mild westerly type of weather, with occasional bright periods, prevailed generally, heavy rainfall occurring locally on the 7th, 10th and 11th. From the 12th till about the 17th the weather was decidedly cold in most districts, with precipitation frequently in the form of snow, sleet or hail. Thereafter temperature rose, and from about the 19th to the 25th the weather was mild and wet, with heavy falls on the 19th, 20th and 25th. (58 mm. at Waterford and 43 mm. at Seskin on the 20th.) On the 26th cold easterly winds spread over the country, bringing cold weather with wintry showers to all except the extreme south-western districts. The mean temperature for the month was in general moderately below the normal, except in the extreme south where it exceeded the normal. Precipitation was below the normal in the north-west, but elsewhere there was a decided excess; at Waterford the month's total amounted to nearly three times the normal. Sunshine aggregates were everywhere less than the normal.

MARCH.

March was quiet, sunny and warm and abnormally dry, with much mist or fog locally at night and in the early morning. Day temperatures exceeded the normal about the tenth and from the 18th onwards, reaching or exceeding 70°F. inland on the 30th, an exceptionally high temperature for March; 72°F. was recorded in Dublin (at Phoenix Park) on the 30th, a temperature which exceeds even the April record since 1881 at that station, i.e., 69°F. in 1909. Associated with clear skies and absence of wind, the nights were cold, ground frost occurring frequently. A noteworthy feature of the month's weather was the large diurnal range of temperature; at Killarney the highest and lowest temperatures recorded on the 30th were respectively 74°F. and 34°F. , a range of 40°F. There was a pronounced deficiency of rainfall, which was confined generally to the period 20th to 24th, more than half the month's small total occurring on the 20th in the south. Over the country as a whole the general precipitation amounted to only about one quarter of the normal; at Killarney the month's total, half of which fell on the 21st, amounted to only 17 per cent. of the normal. Sunshine aggregates for the month exceeded the normal in all districts, the mean daily excess amounting to over 2 hours in most places.

* For twelve weeks only.

† See note (*) on page 3.

‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 30th March, 1929. The birth and death rates are based on the census population of 1926.

TABLE III.—Showing for the Quarter (13 weeks) ended 30th March, 1929, the number of DEATHS of Residents of the several REGISTRARS' DISTRICTS in the DUBLIN REGISTRATION AREA, and in the COUNTY BOROUGH OF CORK; the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases† with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths; the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—This Table contains a Summary of the Weekly Returns for Dublin Registration Area and Cork County Borough. It includes for Dublin the deaths of Dublin residents occurring in Institutions in Bray No. 2 and Killiney Registrars' Districts as well as those of Dublin residents in Institutions located in any of the other 10 towns having a population of 10,000 inhabitants or upwards. The deaths for Cork include those of its residents occurring in Institutions situated in Cork Rural No. 1 and Cork Rural No. 2 Registrars' Districts, and also the deaths of such residents occurring in Institutions situated in any of the principal town districts. The deaths of persons belonging to other localities are here excluded from the figures for the respective areas (see Table II. which gives the results of complete correction for deaths in Institutions).

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

Certain Detailed information Relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Persons Vaccinated, &c., &c., &c.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
Messrs. EASON & SON, LTD., 40-41 LOWER O'CONNELL STREET, DUBLIN.

Price Sixpence Net.

Marriages :—JAN., FEB., MARCH, 1929.

Births and Deaths :—APRIL, MAY, JUNE, 1929.

OIFIG UM CHIÁRÚ GHENEREÁLTA,

TIGH AN CHUSTUIM,

BAILE ÁTHA CLIATH.

During the quarter ended 30th June last, there were registered in Saorstát Éireann, comprising 640 Registrars' Districts, 15,363 Births, equivalent to an annual rate of 20·9 per 1,000 of the estimated population, and 10,877 Deaths, affording an annual rate of 14·8 per 1,000 of the estimated population in the middle of 1929, viz., 2,943,000 persons. It should be borne in mind that the information regarding Births and Deaths registered during the quarter contained in this Report is unrevised. The Annual Report for 1929 will supply the revised figures.

In Northern Ireland, for the quarter, the Births registered were equal to an annual rate of 21.8 per 1,000 of the population, in England and Wales to 17.2 per 1,000, and in Scotland to 20.0 per 1,000.

In the same period the deaths registered in Northern Ireland were equivalent to an annual rate of 14.7 per 1,000 of the population, in England and Wales to 12.1 per 1,000, and in Scotland to 13.0 per 1,000.

MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the first quarter of 1929, was 3,336, equivalent to an annual rate of 4.5 per 1,000 of the estimated population, this rate being 0.6 below that for the corresponding quarter of 1928, and 1.1 below the average for the first quarter of the preceding ten years. Of the total number of marriages 3,181 (or 4.7 per 1,000 of the estimated Roman Catholic population) were those of Roman Catholics, and 155 related to persons belonging to all other denominations, representing 2.8 per 1,000 of the estimated population other than Roman Catholics. The Marriage rate among Roman Catholics is 1.0 below, and that relating to all other denominations is 1.5 below, the average for the first quarter of the ten years 1919-28.

BIRTHS.

Of the Births registered (15,363) during the quarter ended 30th June last, 7,777 were boys and 7,586 girls, the total being equivalent to an annual rate of 20.9 per 1,000 of the estimated population. This rate is 0.8 below the average for the second quarter of the preceding ten years, and 0.6 below that for the second quarter of 1928.

DEATHS.

The Deaths registered during the quarter numbered 10,877, of which 5,427 were of males and 5,450 of females, and are equivalent to an annual rate of 14.8 per 1,000 of the population, being 1.2 below the average for the second quarter of the preceding decennium, and 0.2 below the rate for the second quarter of the year 1928.

CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in Saorstát Éireann from the undermentioned causes for the second quarter of 1929, and for each of the eight preceding quarters, also averages for the second quarter of the five years, 1924-28.

| PERIOD. | Total Deaths registered. | Deaths from Principal Epidemic Diseases. | | | | | | | | | | Annual rate per 1,000 of the population. | Deaths from Tuberculous Disease. | | Deaths from Cancer. | |

* Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

† The rates for Saorstát Éireann, Dublin County, and Dublin County Borough are calculated on the estimated population in the middle of 1929; those for the other areas on the population according to the Census of 1926.

AGES AT DEATH.—Of the 10,877 deaths registered during the quarter, 1,007, or 9.3 per cent., were those of infants under 1 year of age; and 4,922, or 45.3 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 66 per 1,000 births registered, as compared with 56, 69, and 88, for the three preceding quarters.

INQUESTS.—There were 252 Inquests reported to the Registrars during the quarter, this number being equal to one in every 43 of the total deaths registered.

DEATHS IN PUBLIC INSTITUTIONS.—Of the 10,877 deaths registered, 2,710, or 24.9 per cent., occurred in public institutions.

UNCERTIFIED DEATHS.—The Returns furnished by the Registrars show that 2,644, or 24·3 per cent., of the deaths registered during the quarter were uncertified, there having been no medical attendant during the last illness.

VACCINATION.—As returned by the Registrars, the number of Successful Primary Vaccinations during the quarter ended 30th June last was 28,036.

URBAN DISTRICTS.

Table II, page 31, gives separate information for the Urban Districts. It will be observed from this Table that the birth-rate relating to the quarter under review for the entire urban districts, which contain 29 per cent. of the population of Saorstát Éireann, was 24·2 per 1,000 of the population, and that the birth-rate for the remainder of Saorstát Éireann was 19·5 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas, during the quarter, was 14·6 per 1,000 of the population, and for the remainder of Saorstát Éireann the corresponding rate was 14·9 per 1,000.

The urban mortality from the principal epidemic diseases* recorded during the quarter was equivalent to an annual rate of 0·7 per 1,000 of the population of the urban districts, the death rate from these diseases for the remainder of Saorstát Éireann being 0·4 per 1,000 of the population.

ELEVEN PRINCIPAL TOWN DISTRICTS.

As shown in Table II, the annual rate represented by the deaths from all causes during last quarter recorded for the Dublin Registration Area and ten of the principal urban areas of Saorstát Éireann was 14·7 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Kilkenny, 11·1; Dundalk, 11·4; Tralee, 13·3; Sligo, 13·3; Dublin Registration Area, 14·4; Galway, 14·9; Cork, 16·1; Limerick, 16·2; Waterford, 16·5; Wexford, 16·8; and Drogheda, 17·0.

The annual rate represented by the deaths from the principal epidemic diseases* in the 11 districts was 0·7 per 1,000 of the population, the rates varying from 0·0 in Dundalk and Wexford to 3·3 in Waterford, the 110 deaths from all causes for that district including 18 from measles, 2 from whooping-cough, one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 11 towns in the aggregate was 1·66 per 1,000 of the population; for the Dublin Registration Area, it was 1·43 per 1,000 (the rate for Dublin City being 1·58 per 1,000), and for the remaining ten town districts collectively it was 2·09.

DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the total number of births registered during the quarter ended 30th June, 1929, was 2,986—1,474 boys and 1,512 girls—being equal to an annual rate of 28·2 in every 1,000 of the population.

The births recorded for the City numbered 2,222, equivalent to an annual rate of 27·8 in every 1,000 of the population; and for the urban districts named above, 514, equal to an annual rate of 19·7 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 250 in institutions relating to residents of outside localities) amounted to 2,736, affording an annual rate of 25·8 per 1,000.

DEATHS.—Omitting the deaths referred to localities outside the Dublin Registration Area, and including the deaths of residents of the Area registered elsewhere in Saorstát Éireann, the deaths for the Area numbered 1,523, and were equivalent to an annual rate of 14·4 per 1,000 of the population, the average rate for the corresponding period of the previous 10 years being 16·4†. The total number of deaths registered in the Dublin Registration Area during the quarter ended 30th June, was 1,667—843 males and 824 females—affording an annual ratio of 15·7 in every 1,000 of the population, as compared with 18·2 per 1,000 for the second quarter of the ten years, 1919-1928.

The number of deaths of inhabitants of the City of Dublin was 1,143, equivalent to a rate of 14·3 per 1,000. For the urban districts the number was 380, being equal to an annual death rate of 14·6 in every 1,000.

* See note (*) on page 25.

† This figure is not strictly comparable with that for 1929, as it is only partially corrected for deaths in Institutions

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter ended 30th June, 1929, as compared with the average for the second quarter of the five years, 1924-28*.

| Causes of Death. | Deaths, 2nd Quarter, 1929. | Averages, 2nd Quarter, 1924-28.* |
|--|----------------------------------|--|
| Enteric Fever | . | 1 |
| Typhus | . | . |
| Smallpox | . | . |
| Measles | . | 38 |
| Scarlet Fever | . | 5 |
| Whooping-cough | 16 | 26 |
| Diphtheria | 15 | 11 |
| Diarrhoea and Enteritis of Children under 2 years ... | 31 | 30 |
| Influenza | 23 | 24 |
| Tuberculosis | 198 | 209 |

The annual rate represented by the mortality from the principal epidemic diseases† in the Dublin Registration Area was 0·6 per 1,000, in the City it was 0·7, and in the Urban Districts, 0·2.

AGES.—Of the 1,523 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 322 were under five years of age, including 234 infants under one year of age, the latter representing a rate of 86 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 28·7 in every 1,000 children of that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 2·6 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 3·5 per 1,000, the total number under 25 years being equal to an annual mortality of 8·8 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 6·6; for those between 45 and 65 it was 24·2; among persons between 65 and 75 the rate was 51·9, and among those aged 75 and upwards the annual death rate was 121·1 per 1,000. The deaths of 8 persons (3 males and 5 females) aged 90 years and upwards were registered.

PUBLIC INSTITUTIONS.—Of the 1,523 deaths of residents of the Dublin Registration Area, recorded during the quarter, 714, or 46·9 per cent., occurred in public institutions, viz., 478 in the various hospitals, prisons, and lunatic asylums in the Area, 167 in the Dublin Union Workhouse, and 69 in institutions situated in other localities.

ENGLAND AND SCOTLAND.

During the thirteen weeks ended 29th June, 1929, the births in London were equivalent to a rate of 16·4 per 1,000 of the population; in Glasgow the birth rate was 22·9 per 1,000, and in Edinburgh 17·8 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 11·4 in every 1,000 of the civil population; in Glasgow the death-rate was 14·0 per 1,000 of the total population, and in Edinburgh the annual rate was 13·4 per 1,000.

METEOROLOGY.

The mean temperature for the thirteen weeks ended 29th June, 1929, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 49·5°; at Peamount Sanatorium it was 48·2°; at Cork (Roche's Point) it was 51·5°; at Greenwich, 53·3°; at Glasgow, 49·8°; and at Edinburgh, 48·2°.

The mean daily number of hours of bright sunshine recorded at Dublin was 6·5; at Cork (Ballinacurra), 6·3; at Greenwich, 6·4; at Glasgow, 5·6; and at Edinburgh, 5·9.

The rainfall at Dublin during the thirteen weeks measured 4·17 inches; at Peamount Sanatorium, 4·74 inches; at Cork (Roche's Point), it was 7·72 inches; at Greenwich, it was 4·22 inches; at Glasgow, 6·47 inches; and at Edinburgh, 5·51 inches.

* These figures are not strictly comparable with those for 1929, as they are only partially corrected for death in Institutions.

† See note (*) on page 25.

The following information has been kindly furnished by the Director of the Meteorological Office, London :—

APRIL.

April, 1929, was a dry month, with a preponderance of winds between north and east. Day temperatures were, as a rule, moderate or below the normal, and the nights were frequently cold, ground frost occurring widely on several nights. Screen temperatures below freezing point were recorded at night in several inland districts during the first few days of the month and on the 20th and 21st; at Hazelhatch (Co. Dublin) the temperature fell to 23°F. on the 4th and 21st. Considerable sunny periods were experienced in most districts at the beginning of the month, from about the 9th to the 12th and from the 19th to the 22nd, daily amounts exceeding 10 hours being recorded in several places during the two last mentioned periods. The warmest period of the month extended from about the 17th to the 19th, when day temperatures rose above 60°F., and on the 19th maximum temperatures slightly exceeding 65°F. were recorded in many districts in the east and south-east (68°F. at Kilkenny). On the 20th northerly winds occasioned a sharp fall in temperature, and the remainder of the month continued cool, with frequent, though generally slight, rainfall.

Monthly mean temperatures were mostly below the normal. There was a decided deficiency of rainfall. Moderate falls occurred on the 7th or 8th, 14th and 27th (22mm. at Mallaranny on the 7th and at Waterford on the 27th). Sunshine aggregates exceeded the normal along the western seaboard; but in general were below normal.

MAY.

The weather during the first half of May was cool and unsettled and rain fell frequently, the largest falls being recorded generally in the south and west between the 3rd and 8th and on the 13th and 14th. On the 16th anticyclonic conditions became established for a time, and from the 19th to the 21st sunny and warmer weather prevailed generally, the temperature rising to 68°F. at Birr on the 20th and to 69°F. in Dublin on the 21st. On the 22nd rain fell in most districts, and some heavy falls were recorded, including 39mm. at Newtownbarry (Wexford) and 38mm. at Seskin and Waterford. Good sunshine records were obtained on the 23rd and 24th. There was a recurrence of heavy rain locally on the 26th and 27th, and in some places thunderstorms were reported. During the remainder of the month there was no measurable rain. Following high day temperatures on the 27th and 28th (71°F. at Birr on both these dates and 75°F. at Cork and Cahirciveen on the 28th) there was a marked fall in temperature on the 29th, but on the 31st the temperature again rose to 70°F. except in eastern districts. Excellent sunshine records were obtained during the period 27th to 31st, especially in western districts. Mean temperatures for the month were somewhat below the normal in the south-east and about or above the normal elsewhere. Rainfall totals were in general below the normal in the west, north-west and east, and above the normal in the south and south-east. Sunshine totals were in general above the normal.

JUNE.

Notwithstanding an excess of sunshine in almost all districts, June, 1929, was, on the whole, a cool month. Except for short periods of anticyclonic weather on the 9th and 10th and 20th and 21st, the weather during the first three weeks was unsettled, with frequent rain or showers during the first eight days and some fairly heavy falls on the 7th and 8th (14mm. at Kilkenny on the 7th, 17 mm. at Newtownbarry and Roche's Point on the 8th.) Thunderstorms, accompanied in some districts by hail, occurred on the 6th and 8th. There were, however, sunny periods, good sunshine records being obtained in several districts on the 6th, 7th and 8th. Anticyclonic conditions became established temporarily on the 9th, and on the 9th, 10th and, except in the extreme west, on the 11th, mainly fine weather with moderate day temperatures prevailed in most districts; 10 hours or more bright sunshine were recorded daily in Dublin (Phoenix Park) on the 9th, 10th and 11th, as much as 15.0 hours being recorded on the 11th.

Heavy rain fell locally on the west coast on the 11th (36mm. at Blacksod) and on the 12th unsettled weather extended to all districts, with much cloud and frequent though generally slight, rainfall. Anticyclonic conditions spread in from the south-west on the 20th, and, apart from rain on the 22nd, the weather during the remainder of the month was fine, dry and warm, abundant sunshine being recorded widely during the last five days of the month, while the temperature rose to 70°F. and over in several districts on the 27th and 28th. Monthly totals of rainfall were in general above the normal in western districts, but in most other parts of the country they were below the normal. Monthly aggregates of bright sunshine exceeded the normal in nearly all districts.

TABLE A.—Showing the MEAN WEEKLY VALUES and the differences from their NORMAL VALUES of the Meteorological Elements at the Phoenix Park, Dublin, for the thirteen Weeks ended June 29th, 1929.

† See Note (*) on page 25.

† The rates for the Dublin Registration Area and its component parts are calculated on the estimated population in the middle of 1929.

[illegible]

† See note (*) on page 25.

† See note (v) on page 23.
‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 29th June, 1929. The birth and death rates are based on the census population of 1926.

TABLE III.—Showing for the Quarter (13 weeks) ended 29th June, 1929, the number of DEATHS of Residents of the several REGISTRARS' DISTRICTS in the DUBLIN REGISTRATION AREA, and in the COUNTY BOROUGH OF CORK; the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases† with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths; the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—This Table contains a Summary of the Weekly Returns for Dublin Registration Area and Cork County Borough. It includes for Dublin the deaths of Dublin residents occurring in Institutions in Bray No. 2 and Killeeney Registrars' Districts as well as those of Dublin residents in Institutions located in any of the other 10 towns having a population of 10,000 inhabitants or upwards. The deaths for Cork include those of its residents occurring in Institutions situated in Cork Rural No. 1 and Cork Rural No. 2 Registrars' Districts, and also the deaths of such residents occurring in Institutions situated in any of the principal town districts. The deaths of persons belonging to other localities are here excluded from the figures for the respective areas (see Table II. which gives the results of complete correction for deaths in Institutions).

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

Certain Detailed information Relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Persons Vaccinated, &c., &c., &c.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
Messrs. EASON & SON, LTD., 40-41 LOWER O'CONNELL STREET, DUBLIN.

Price Sixpence Net.

Marriages :—APRIL, MAY, JUNE, 1929.

Births and Deaths :—JULY, AUGUST, SEPTEMBER, 1929.

OIFIG UM CHIÁRÚ GHENEREÁLTA,

TIGH AN CHUSTUIM,

BAILE ÁTHA CLIATH.

During the quarter ended 30th September last, there were registered in Saorstát Éireann, comprising 641 Registrars' Districts, 14,974 Births, equivalent to an annual rate of 20·4 per 1,000 of the estimated population, and 8,519 Deaths, affording an annual rate of 11·6 per 1,000 of the estimated population in the middle of 1929, viz., 2,943,000 persons. It should be borne in mind that the information regarding Births and Deaths registered during the quarter contained in this Report is unrevised. The Annual Report for 1929 will supply the revised figures.¹

In Northern Ireland, for the quarter, the Births registered were equal to an annual rate of 20·7 per 1,000 of the population, in England and Wales to 16·5 per 1,000, and in Scotland to 18·7 per 1,000.

In the same period the deaths registered in Northern Ireland were equivalent to an annual rate of 11·0 per 1,000 of the population, in England and Wales to 9·7 per 1,000, and in Scotland to 10·8 per 1,000.

MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the second quarter of 1929, was 3,130, equivalent to an annual rate of 4·3 per 1,000 of the estimated population, this rate being 0·1 below that for the corresponding quarter of 1928, and 0·5 below the average for the second quarter of the preceding ten years. Of the total number of marriages 2,861 (or 4·2 per 1,000 of the estimated Catholic population) were those of Catholics, and 269 related to persons belonging to all other denominations, representing 4·9 per 1,000 of the estimated population other than Catholics. The Marriage rate among Catholics is 0·6 below, and that relating to all other denominations is 0·7 below, the average for the second quarter of the ten years 1919-28.

BIRTHS.

Of the Births registered (14,974) during the quarter ended 30th September last, 7,644 were boys and 7,330 girls, the total being equivalent to an annual rate of 20·4 per 1,000 of the estimated population. This rate is the same as the average for the third quarter of the preceding ten years, and 0·2 above that for the third quarter of 1928.

DEATHS.

The Deaths registered during the quarter numbered 8,519, of which 4,386 were of males and 4,133 of females, and are equivalent to an annual rate of 11·6 per 1,000 of the population, being 0·4 below the average for the third quarter of the preceding decennium, and equal to the rate for the third quarter of the year 1928.

CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in Saorstát Éireann from the undermentioned causes for the third quarter of 1929, and for each of the eight preceding quarters, also averages for the third quarter of the five years, 1924-28.

| PERIOD. | Total Deaths registered. | Deaths from Principal Epidemic Diseases. | | | | | | | | | | Deaths from Tuberculous Disease. | | Deaths from Cancer. | | |

* Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

† The rates for Saorstát Éireann, Dublin County, and Dublin County Borough are calculated on the estimated population in the middle of 1929; those for the other areas on the population according to the Census of 1926.

AGES AT DEATH.—Of the 8,519 deaths registered during the quarter, 879, or 10·3 per cent., were those of infants under 1 year of age; and 3,496, or 41·0 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 59 per 1,000 births registered, as compared with 69, 88, and 66, for the three preceding quarters.

INQUESTS.—There were 302 Inquests reported to the Registrars during the quarter, this number being equal to one in every 28 of the total deaths registered.

DEATHS IN PUBLIC INSTITUTIONS.—Of the 8,519 deaths registered, 2,341, or 27·5 per cent., occurred in public institutions.

UNCERTIFIED DEATHS.—The Returns furnished by the Registrars show that 1,759, or 20·7 per cent., of the deaths registered during the quarter were uncertified, there having been no medical attendant during the last illness.

VACCINATION.—As returned by the Registrars, the number of Successful Primary Vaccinations during the quarter ended 30th September last was 16,967.

URBAN DISTRICTS.

Table II, page 53, gives separate information for the Urban Districts. It will be observed from this Table that the birth-rate relating to the quarter under review for the entire urban districts, which contain 29 per cent. of the population of Saorstát Éireann, was 24·4 per 1,000 of the population, and that the birth-rate for the remainder of Saorstát Éireann was 18·7 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas, during the quarter, was 12·5 per 1,000 of the population, and for the remainder of Saorstát Éireann the corresponding rate was 11·2 per 1,000.

The urban mortality from the principal epidemic diseases * recorded during the quarter was equivalent to an annual rate of 0·9 per 1,000 of the population of the urban districts, the death rate from these diseases for the remainder of Saorstát Éireann being 0·4 per 1,000 of the population.

ELEVEN PRINCIPAL TOWN DISTRICTS.

As shown in Table II, the annual rate represented by the deaths from all causes during last quarter recorded for the Dublin Registration Area and ten of the principal urban areas of Saorstát Éireann was 12·9 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Tralee, 6·1; Sligo, 6·3; Dundalk, 10·9; Drogheda, 11·3; Wexford, 12·1; Galway, 12·7; Dublin Registration Area, 12·9; Waterford, 13·5; Limerick, 13·9; Cork, 14·2; and Kilkenny, 17·1.

The annual rate represented by the deaths from the principal epidemic diseases * in the 11 districts was 1·1 per 1,000 of the population, the rates varying from 0·0 in Sligo and Tralee to 2·0 in Dundalk, the 38 deaths from all causes for that district including one from measles, and 6 from diarrhoea and enteritis of children under 2 years of age.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 11 towns in the aggregate was 1·21 per 1,000 of the population; for the Dublin Registration Area, it was 1·12 per 1,000 (the rate for Dublin City being 1·16 per 1,000), and for the remaining ten town districts collectively it was 1·36.

DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the total number of births registered during the quarter ended 30th September, 1929, was 3,137—1,599 boys and 1,538 girls—being equal to an annual rate of 29·6 in every 1,000 of the population.

The births recorded for the City numbered 2,364, equivalent to an annual rate of 29·6 in every 1,000 of the population; and for the urban districts named above, 460, equal to an annual rate of 17·7 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 313 in institutions relating to residents of outside localities) amounted to 2,824, affording an annual rate of 26·7 per 1,000.

DEATHS.—Omitting the deaths referred to localities outside the Dublin Registration Area, and including the deaths of residents of the Area registered elsewhere in Saorstát Éireann, the deaths for the Area numbered 1,368, and were equivalent to an annual rate of 12·9 per 1,000 of the population, the average rate for the corresponding period of the previous 10 years being 13·3 †. The total number of deaths registered in the Dublin Registration Area during the quarter ended 30th September was 1,510—722 males and 788 females—affording an annual ratio of 14·3 in every 1,000 of the population, as compared with 14·8 per 1,000 for the third quarter of the ten years, 1919-1928.

The number of deaths of inhabitants of the City of Dublin was 1,074, equivalent to a rate of 13·4 per 1,000. For the urban districts the number was 294, being equal to an annual death rate of 11·3 in every 1,000.

* See note (*) on page 47.

† This figure is not strictly comparable with that for 1929, as it is only partially corrected for deaths in Institutions

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter ended 30th September, 1929, as compared with the average for the third quarter of the five years, 1924-28*.

| Causes of Death. | Deaths, 3rd Quarter, 1929. | Averages, 3rd Quarter, 1924-28.* |
|---|----------------------------------|--|
| Enteric Fever | . | 1 |
| Typhus | . | . |
| Smallpox | . | . |
| Measles | . | 14 |
| Scarlet Fever | 1 | 5 |
| Whooping-cough | 36 | 9 |
| Diphtheria | 10 | 8 |
| Diarrhœa and Enteritis of Children under 2 years ... | 75 | 121 |
| Influenza | 8 | 5 |
| Tuberculosis | 160 | 156 |

The annual rate represented by the mortality from the principal epidemic diseases † in the Dublin Registration Area was 1·2 per 1,000, in the City it was 1·4, and in the Urban Districts, 0·5.

AGES.—Of the 1,368 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 369 were under five years of age, including 258 infants under one year of age, the latter representing a rate of 91 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 32·9 in every 1,000 children of that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 1·9 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 4·2 per 1,000, the total number under 25 years being equal to an annual mortality of 9·8 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 4·9; for those between 45 and 65 it was 20·4; among persons between 65 and 75 the rate was 47·2, and among those aged 75 and upwards the annual death rate was 84·0 per 1,000. The deaths of 7 persons (one male and 6 females) aged 90 years and upwards were registered.

PUBLIC INSTITUTIONS.—Of the 1,368 deaths of residents of the Dublin Registration Area, recorded during the quarter, 641, or 46·9 per cent., occurred in public institutions, viz., 431 in the various hospitals, prisons, and lunatic asylums in the Area, 147 in the Dublin Union Workhouse, and 63 in institutions situated in other localities.

ENGLAND AND SCOTLAND.

During the thirteen weeks ended 28th September, 1929, the births in London were equivalent to a rate of 15·7 per 1,000 of the population; in Glasgow the birth rate was 20·6 per 1,000, and in Edinburgh 16·6 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 8·9 in every 1,000 of the civil population; in Glasgow the death-rate was 11·4 per 1,000 of the total population, and in Edinburgh the annual rate was 11·5 per 1,000.

METEOROLOGY.

The mean temperature for the thirteen weeks ended 28th September, 1929, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 58·1°; at Peamount Sanatorium it was 57·9°; at Cork (Roche's Point) it was 59·2°; at Greenwich, 64·1°; at Glasgow, 57·2°; and at Edinburgh, 57·0°.

The mean daily number of hours of bright sunshine recorded at Dublin was 4·7; at Peamount Sanatorium, 4·3; at Cork (Ballinacurra), 4·8; at Greenwich, 6·8; at Glasgow, 3·9; and at Edinburgh, 5·2.

The rainfall at Dublin during the thirteen weeks measured 7·87 inches; at Peamount Sanatorium, 6·93 inches; at Cork (Roche's Point), it was 7·95 inches; at Greenwich, it was 3·92 inches; at Glasgow, 9·57 inches; and at Edinburgh, 6·54 inches.

* These figures are not strictly comparable with those for 1929, as they are only partially corrected for deaths in Institutions.

† See note (*) on page 47.

The following information has been kindly furnished by the Director of the Meteorological Office, London :—

JULY.

The month opened with cloudy and cool weather, with some fairly heavy falls of rain during the period 3rd to 5th. Thunderstorms occurred in some districts on the 4th and 5th, Dublin experiencing a severe thunderstorm, accompanied by hail, on the afternoon of the 5th. A few days of northerly winds and cool weather with bright periods followed. Abundant sunshine was widely experienced on the 7th, 12·5 hours' sunshine being recorded at Cahirciveen (Kerry) on that day. After the 8th, south-westerly winds set in, and from the 9th to the 11th the weather was unsettled and wet. On the 12th an anticyclone to the west had begun to move eastwards across the country, and, from the 12th to the 16th, fine warm weather was experienced in all districts; the hottest days of the month occurring on the 14th and 15th, when temperatures in the neighbourhood of 80°F. were widely recorded. Rain fell in the west on the 18th and 19th, and the final disappearance of the warm weather was marked by widespread heavy rain on the 21st or 22nd. A cool dry spell followed, and this was in turn succeeded by unsettled wet weather during the last five days of the month. Monthly mean temperatures were mostly within 1°F. of the normal. Monthly rainfall totals were below the normal in the eastern counties, but in the south and west and north-west they exceeded the normal. Sunshine aggregates were below the normal in almost all districts, an excess occurring only in the extreme north-west.

AUGUST.

August, 1929, was wet generally, with many rain-days. Rainfall totals were below the normal in the south-east, but over the greater part of the country there was an excess, and in the west and north-west totals reached or exceeded one and a half times the normal. Heavy falls were recorded on the 3rd, 5th, 6th, 16th, 23rd, and 30th; in Dublin almost two-thirds of the month's total, 98 mm., was accounted for by falls of 25 mm. on the 3rd, 14 mm. on the 5th, and 21 mm. in a severe thunderstorm on the 6th. Amongst the heaviest daily falls were 37 mm. at Markree (Sligo) and 35 mm. at Malin Head on the 30th, 32 mm. in Dublin (Glasnevin) and 31 mm. at Newtownforbes (Longford) on the 6th, and 29 mm. at Foynes on the 23rd. Day temperatures were mostly somewhat below the normal, the warmest days generally being the 3rd, 10th, 26th, 27th and 30th, when maximum temperatures in the neighbourhood of 70°F. were recorded in many districts. The nights, however, were frequently mild, and monthly mean temperatures differed only slightly from the normal. Sunshine aggregates were everywhere decidedly below the normal. The sunniest days occurred generally at the beginning of the month on the 6th or 7th, from about the 14th to 18th, and on the 25th or 26th and on the 28th. At Cahirciveen 13·1 hours' sunshine were recorded on the 25th.

SEPTEMBER.

Apart from generally unsettled conditions about the 20th and towards the end of the month, conditions were mainly anticyclonic over the greater part of the country, practically the only districts materially affected by depressions being those along the western seaboard. Accordingly, in most districts the weather was mainly fine and warm, particularly during the first half of the month, when maximum temperatures in the neighbourhood of 70°F. were widely recorded on several days; the warmest day was in most districts the 8th, the temperature on this day rising to 80°F. in Dublin (Trinity College) and at Newcastle (Wicklow) and Kilkenny. Day temperatures were generally moderate after the 17th, but again rose temporarily to nearly 70°F. about the 26th. Night temperatures, too, mostly exceeded the normal. Monthly mean temperatures were from 2°F. to 3°F. above the normal. In the west and northwest rain fell fairly frequently, and some moderate to heavy falls occurred locally on the 2nd or 3rd and 17th, but usually amounts were small. Over the greater part of the country, however, rain in substantial amount fell only on the 28th and 29th; in Dublin City the combined precipitation on these two days represented nearly 73 per cent. of the total for the month. Monthly totals of rainfall were below the normal in all districts, the deficiency being most pronounced in the neighbourhood of Dublin, where locally less than 20 per cent. of the normal was recorded. Foynes had only 27 per cent. of the normal September rainfall, Markree (Sligo) 34 per cent., Birr 36 per cent., and Ballinacurra 39 per cent. There was a deficiency of sunshine in the north-west, but over most of the country there was an excess. 11·9 hours' sunshine was recorded at Hazelhatch (Dul lin) on the 8th, and 10·5 hours' at Mallaranny, and 10·2 hours' at Cork on the 16th.

TABLE A.—Showing the MEAN WEEKLY VALUES and the differences from their NORMAL VALUES of the Meteorological Elements at the Phoenix Park, Dublin, for the thirteen Weeks ended September 28th, 1929.

URBAN DISTRICTS—continued.

REGISTRATION THIRD QUARTER 1929.

[illegible]

[illegible]

† See note (*) on page 47.

The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 28th September, 1929. The birth and death rates are based on the census population of 1926.

TABLE IV.—SUMMARY of CASES of INFECTIOUS DISEASES notified to the Department of Local Government and Public Health, in respect of Saorstát Éireann, for the Quarter ended 30th September, 1929.

Price Sixpence Net.

Marriages :—JULY, AUGUST, SEPTEMBER, 1929. Births and Deaths :—OCTOBER, NOV., DEC., 1929.

OIFIG UM CHLÁRÚ GHENEREÁLTA,

TIGH AN CHUSTUIM,

BAILE ÁTHA CLIATH.

During the quarter ended 31st December last, there were registered in Saorstát Éireann, comprising 641 Registrars' Districts, 13,793 Births, equivalent to an annual rate of 18·7 per 1,000 of the estimated population, and 9,612 Deaths, affording an annual rate of 13·1 per 1,000 of the estimated population in the middle of 1929, viz., 2,943,000 persons. It should be borne in mind that the information regarding Births and Deaths registered during the quarter contained in this Report is subject to revision in the detailed Annual Report:

In Northern Ireland, for the quarter, the Births registered were equal to an annual rate of 18·7 per 1,000 of the population, in England and Wales to 15·1 per 1,000, and in Scotland to 17·8 per 1,000.

In the same period the deaths registered in Northern Ireland were equivalent to an annual rate of 13·0 per 1,000 of the population, in England and Wales to 11·3 per 1,000, and in Scotland to 12·4 per 1,000.

MARRIAGES.

The number of Marriages registered in Saorstát Éireann during the third quarter of 1929, was 3,672, equivalent to an annual rate of 5·0 per 1,000 of the estimated population, this rate being 0·2 above that for the corresponding quarter of 1928, and equal to the average for the third quarter of the preceding ten years. Of the total number of marriages 3,377 (or 5·0 per 1,000 of the estimated Catholic population) were those of Catholics, and 295 related to persons belonging to all other denominations, representing 5·4 per 1,000 of the estimated population other than Catholics. The Marriage rate among Catholics is 0·1 above, and that relating to all other denominations is 1·0 below, the average for the third quarter of the ten years 1919-28.

BIRTHS.

Of the Births registered (13,793) during the quarter ended 31st December last, 7,040 were boys and 6,753 girls, the total being equivalent to an annual rate of 18·7 per 1,000 of the estimated population. This rate is 0·3 below the average for the fourth quarter of the preceding ten years, and 0·1 below that for the fourth quarter of 1928.

DEATHS.

The Deaths registered during the quarter numbered 9,612, of which 4,800 were of males and 4,812 of females, and are equivalent to an annual rate of 13·1 per 1,000 of the population, being 0·3 below the average for the fourth quarter of the preceding decennium, and 0·1 above the rate for the fourth quarter of the year 1928.

CAUSES OF DEATH.

The following statement gives particulars regarding Deaths registered in Saorstát Éireann from the undermentioned causes for the fourth quarter of 1929, and for each of the eight preceding quarters, also averages for the fourth quarter of the five years, 1924-28.

| PERIOD. | Total Deaths registered. | Deaths from Principal Epidemic Diseases. | | | | | | | | | | Deaths from Tuberculous Disease. | | Deaths from Cancer. | | |

* Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

† The rates for Saorstát Éireann, Dublin County, and Dublin County Borough are calculated on the estimated population in the middle of 1929; those for the other areas on the population according to the Census of 1926.

AGES AT DEATH.—Of the 9,612 deaths registered during the quarter, 931, or 9·7 per cent., were those of infants under 1 year of age; and 4,285, or 44·6 per cent., were of persons aged 65 years and upwards. The number of deaths of infants was equivalent to 67 per 1,000 births registered, as compared with 88, 66, and 59, for the three preceding quarters.

INQUESTS.—There were 284 Inquests reported to the Registrars during the quarter, this number being equal to one in every 34 of the total deaths registered.

DEATHS IN PUBLIC INSTITUTIONS.—Of the 9,612 deaths registered, 2,669, or 27·8 per cent., occurred in public institutions.

UNCERTIFIED DEATHS.—The Returns furnished by the Registrars show that 2,206, or 23·0 per cent., of the deaths registered during the quarter were uncertified, there having been no medical attendant during the last illness.

VACCINATION.—As returned by the Registrars, the number of Successful Primary Vaccinations during the quarter ended 31st December last was 9,225.

URBAN DISTRICTS.

Table II, page 75, gives separate information for the Urban Districts. It will be observed from this Table that the birth-rate relating to the quarter under review for the entire urban districts, which contain 29 per cent. of the population of Saorstát Éireann, was 21·7 per 1,000 of the population, and that the birth-rate for the remainder of Saorstát Éireann was 17·5 per 1,000.

The annual rate represented by the deaths from all causes for these urban areas, during the quarter, was 14·1 per 1,000 of the population, and for the remainder of Saorstát Éireann the corresponding rate was 12·6 per 1,000.

The urban mortality from the principal epidemic diseases * recorded during the quarter was equivalent to an annual rate of 1·0 per 1,000 of the population of the urban districts, the death rate from these diseases for the remainder of Saorstát Éireann being 0·3 per 1,000 of the population.

ELEVEN PRINCIPAL TOWN DISTRICTS.

As shown in Table II, the annual rate represented by the deaths from all causes during last quarter recorded for the Dublin Registration Area and ten of the principal urban areas of Saorstát Éireann was 14·3 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest: Galway, 10·4; Dundalk, 10·9; Kilkenny, 13·1; Sligo, 13·6; Tralee, 13·7; Waterford, 14·3; Dublin Registration Area, 14·5; Limerick, 14·6; Drogheda, 14·8; Cork 15·0; and Wexford, 15·5.

The annual rate represented by the deaths from the principal epidemic diseases * in the 11 districts was 1·1 per 1,000 of the population, the rates varying from 0·3 in Wexford to 1·9 in Cork, the 295 deaths from all causes for that district including 14 from measles, 3 from whooping cough, 10 from diphtheria, and 10 from diarrhoea and enteritis of children under 2 years of age.

PULMONARY TUBERCULOSIS.—The annual rate represented by the deaths from pulmonary tuberculosis for the 11 towns in the aggregate was 1·21 per 1,000 of the population; for the Dublin Registration Area, it was 1·11 per 1,000 (the rate for Dublin City being 1·21 per 1,000), and for the remaining ten town districts collectively it was 1·39.

DUBLIN REGISTRATION AREA.

BIRTHS.—In the Dublin Registration Area, which consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the total number of births registered during the quarter ended 31st December, 1929, was 2,708—1,423 boys and 1,285 girls—being equal to an annual rate of 25·6 in every 1,000 of the population.

The births recorded for the City numbered 2,023, equivalent to an annual rate of 25·3 in every 1,000 of the population; and for the urban districts named above, 420, equal to an annual rate of 16·1 in every 1,000 of the population. Hence during the quarter, the births in the Dublin Registration Area (exclusive of 265 in institutions relating to residents of outside localities) amounted to 2,443, affording an annual rate of 23·1 per 1,000.

DEATHS.—Omitting the deaths referred to localities outside the Dublin Registration Area, and including the deaths of residents of the Area registered elsewhere in Saorstát Éireann, the deaths for the Area numbered 1,531, and were equivalent to an annual rate of 14·5 per 1,000 of the population, the average rate for the corresponding period of the previous 10 years being 15·9 †. The total number of deaths registered in the Dublin Registration Area during the quarter ended 31st December was 1,671—826 males and 845 females—affording an annual ratio of 15·8 in every 1,000 of the population, as compared with 17·2 per 1,000 for the fourth quarter of the ten years, 1919-1928.

The number of deaths of inhabitants of the City of Dublin was 1,206, equivalent to a rate of 15·1 per 1,000. For the urban districts the number was 325, being equal to an annual death rate of 12·5 in every 1,000.

* See note (*) on page 69.

† This figure is not strictly comparable with that for 1929, as it is only partially corrected for deaths in Institutions

The following statement shows the number of deaths from some of the principal causes recorded for the Dublin Registration Area during the quarter ended 31st December, 1929, as compared with the average for the fourth quarter of the five years, 1924-28*.

| Causes of Death. | Deaths, 4th Quarter, 1929. | Averages, 4th Quarter, 1924-28.* |
|--|----------------------------------|--|
| Enteric Fever | 1 | 2 |
| Typhus | . | . |
| Small-pox | . | . |
| Measles | 1 | 14 |
| Scarlet Fever | 3 | 4 |
| Whooping-cough | 26 | 10 |
| Diphtheria | 17 | 18 |
| Diarrhoea and Enteritis of Children under 2 years ... | 56 | 61 |
| Influenza | 11 | 15 |
| Tuberculosis | 153 | 166 |

The annual rate represented by the mortality from the principal epidemic diseases † in the Dublin Registration Area was 1.0 per 1,000, in the City it was 1.1, and in the Urban Districts, 0.5.

AGES.—Of the 1,531 deaths of persons belonging to the Dublin Registration Area registered during the quarter, 349 were under five years of age, including 255 infants under one year of age, the latter representing a rate of 104 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 31.1 in every 1,000 children of that age, the deaths of persons between the ages of 5 and 15 representing an annual rate of 2.6 per 1,000 persons at that age period; those between the ages of 15 and 25 were equivalent to an annual rate of 4.0 per 1,000, the total number under 25 years being equal to an annual mortality of 9.5 per 1,000 of the population at that age period; for those between 25 and 45 the rate was 6.3; for those between 45 and 65 it was 23.0; among persons between 65 and 75 the rate was 56.1, and among those aged 75 and upwards the annual death rate was 111.8 per 1,000. The deaths of 18 persons (3 males and 15 females) aged 90 years and upwards were registered.

PUBLIC INSTITUTIONS.—Of the 1,531 deaths of residents of the Dublin Registration Area, recorded during the quarter, 753, or 49.2 per cent., occurred in public institutions, viz., 520 in the various hospitals, prisons, and lunatic asylums in the Area, 169 in the Dublin Union Workhouse, and 64 in institutions situated in other localities.

ENGLAND AND SCOTLAND.

During the thirteen weeks ended 28th December, 1929, the births in London were equivalent to a rate of 14.6 per 1,000 of the population; in Glasgow the birth rate was 19.7 per 1,000, and in Edinburgh 15.7 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 11.1 in every 1,000 of the civil population; in Glasgow the death-rate was 13.6 per 1,000 of the total population, and in Edinburgh the annual rate was 13.8 per 1,000.

METEOROLOGY.

The mean temperature for the thirteen weeks ended 28th December, 1929, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 45.2°; at Peamount Sanatorium it was 46.2°†; at Cork (Roche's Point) it was 48.8°; at Greenwich, 47.0°; at Glasgow, 44.2°; and at Edinburgh, 43.8°.

* These figures are not strictly comparable with those for 1929, as they are only partially corrected for deaths in Institutions.

† See note (*) on page 69.

‡ 12 weeks.

The mean daily number of hours of bright sunshine recorded at Dublin was 3·1 ; at Cork (Ballinacurra), 2·3 ; at Greenwich, 2·3 ; at Glasgow, 1·5 ; and at Edinburgh, 2·7.

The rainfall at Dublin during the thirteen weeks measured 12·83 inches ; at Peamount Sanatorium, 12·20* inches ; at Cork (Roche's Point), it was 17·64 inches ; at Greenwich, it was 12·02 inches ; at Glasgow, 18·67 inches ; and at Edinburgh, 10·38 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London :—

OCTOBER.

October was wet and windy with considerable bright periods. The first eight days were very unsettled, with frequent rain, heavy falls occurring on the 5th and 7th. On the 9th an anticyclone, drifting slowly eastwards, brought fair and very mild weather, which lasted until the 15th. The temperature rose above 60°F. on the 13th, 14th and 15th in several places and reached the unusually high level of 68°F. at Kilkenny and Mountmellick, and 67°F. at Dublin (Glasnevin, Phoenix Park and Trinity College), Newcastle (Wicklow) and Foynes. After the 15th there was a return to unsettled conditions, with bright but cold intervals and showers, the only heavy rain occurring on the 23rd. Low screen temperatures occurred during the last few nights. Monthly mean temperatures were within 1°F. of the normal. Excepting a moderate deficiency in the east and south-east, rainfall totals exceeded the normal. Sunshine aggregates for the month exceeded the normal, particularly in County Dublin, but were deficient in the extreme south-west.

NOVEMBER.

The outstanding feature of the weather of November was its pronounced wetness. Rainfall totals everywhere exceeded the normal and in the south-east twice the normal fall was recorded. In Dublin, where the total rainfall amounted to 123mm., the month was the wettest November since 1916, while at Cahirciveen (Kerry), where the month's rainfall, 250mm., was equivalent to almost twice the normal, it was the wettest November since, at least, 1871. Heavy falls occurred in many places on the 9th, 11th, 15th and 18th. The month was mostly mild, although owing to a cold period, when frosts were frequent, from the 13th to the 18th, the mean temperature for the month did not differ much from the normal. Strong winds occurred fairly frequently, with gales on the 11th, 15th, 18th, 24th and 25th. Sunshine aggregates for the month were below normal.

DECEMBER.

December was both stormy and wet. Except for a brief period of fair, dry weather from the 15th to the 18th, conditions during the month were unsettled, with frequent heavy rain and gales between the 4th and 12th and on the 24th-25th and 28th to 29th. Snow fell in a few places on the 21st and 22nd, but in general the month was mild, especially so at the beginning and about the middle of the month ; at Hazelhatch (Co. Dublin) the temperature on the 2nd rose to 60°F. In most districts the mean temperature for the month was above the normal, although the excess was slight. In most places the month's rainfall exceeded one and a half times the normal, and in the east and south-east more than twice the normal ; at Cahirciveen the month was the wettest December since, at least, 1871. There were frequent sunny intervals during the month and in most places, particularly in the east and south-east, sunshine aggregates exceeded the normal.

* 12 weeks.

† See note (*) on page 69.

‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the thirteen weeks ended 28th December, 1929. The birth and death rates are based on the census population of 1926.

TABLE III.—Showing for the Quarter (13 weeks) ended 28th December, 1929, the number of DEATHS of Residents of the several REGISTRARS' DISTRICTS in the DUBLIN REGISTRATION AREA, and in the COUNTY BOROUGH OF CORK; the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases† with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths; the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—This Table contains a Summary of the Weekly Returns for Dublin Registration Area and Cork County Borough. It includes for Dublin the deaths of Dublin residents occurring in Institutions in Bray No. 2 and Killiney Registrars' Districts as well as those of Dublin residents in Institutions located in any of the other 10 towns having a population of 10,000 inhabitants or upwards. The deaths for Cork include those of its residents occurring in Institutions situated in Cork Rural No. 1 and Cork Rural No. 2 Registrars' Districts, and also the deaths of such residents occurring in Institutions situated in any of the principal town districts. The deaths of persons belonging to other localities are here excluded from the figures for the respective areas (see Table II. which gives the results of complete correction for deaths in Institutions).

[illegible]

YEAR 1929.

BIRTHS AND DEATHS RELATING TO THE DUBLIN REGISTRATION AREA, TEN OF THE PRINCIPAL TOWNS, AND OTHER URBAN DISTRICTS, IN SAORSTÁT ÉIREANN, DURING THE YEAR 1929.

[The particulars given in the following text and in Tables 1, 2 and 3 are for the calendar year, and are completely corrected for Deaths in Institutions throughout Saorstát Éireann. Tables 4, 6 and 7 refer to the 52 weeks ended 28th December, 1929, and are derived directly from the Weekly Returns.]

Table 2, page 92, gives information relating to births and deaths for each county borough and urban district in Saorstát Éireann during the year 1929. This table also includes a summary of the 11 principal town districts. It will be observed that the rate represented by the number of births recorded for the entire urban districts during the year was 23·3 per 1,000 of the population, and for the rural districts 18·4 per 1,000, the birth rate for Saorstát Éireann being 19·8 per 1,000.

In the urban districts the death-rate from all causes was 15·6 per 1,000. In the remaining districts the death-rate was 14·2, the death-rate for all Saorstát Éireann being 14·6 per 1,000.

For the principal epidemic diseases* in 1929, the rate in the urban districts was 0·9 per 1,000, and in the rural districts 0·4 per 1,000, the rate for Saorstát Éireann as a whole being 0·5 per 1,000.

The infant mortality rate for the urban districts, based on the births and deaths of infants under one year of age, recorded for the year 1929, as returned by the Registrars, was 96 per 1,000 births, the rate for the rural districts being 56 per 1,000. In the whole of Saorstát Éireann the rate was equivalent to 70 per 1,000 births registered.

ELEVEN PRINCIPAL TOWN DISTRICTS.

MORTALITY FROM ALL CAUSES.—As shown in Table 2, the rate represented by the deaths from all causes registered during the year for the Dublin Registration Area and ten of the principal urban areas of Saorstát Éireann (exclusive of deaths in public institutions of persons admitted from without the districts, and inclusive of deaths of residents of the districts registered elsewhere in Saorstát Éireann), was 16·1 per 1,000 of the population, the respective rates for the several districts being as follows, ranging in order from the lowest to the highest:—Sligo, 11·0; Tralee, 12·3; Dundalk, 12·5; Galway, 14·8; Kilkenny, 15·4; Wexford, 15·4; Dublin Registration Area, 16·2; Limerick, 16·6; Cork, 16·7; Drogheda, 17·0; and Waterford, 17·0.

PRINCIPAL EPIDEMIC DISEASES.—The annual rate represented by the deaths from the principal epidemic diseases* in the 11 districts was 1·0 per 1,000 of the population, the rates varying from 0·4 in Sligo and in Galway, to 2·3 in Waterford, the 453 deaths from all causes for the latter district including 22 from measles, 17 from whooping cough, 3 from diphtheria, and 20 from diarrhoea and enteritis of children under 2 years. The 1,308 deaths from all causes for Cork include one from enteric fever, one from typhus, 15 from measles, 3 from scarlet fever, 30 from whooping-cough, 33 from diphtheria, and 25 from diarrhoea and enteritis of children under 2 years.

PULMONARY TUBERCULOSIS.—The rate represented by the deaths from pulmonary tuberculosis for the 11 towns in the aggregate was 1·48 per 1,000 of the population; for the Dublin Registration Area it was 1·40 per 1,000; and for the towns collectively (not including Dublin Registration Area), it was 1·63. The rate for Dublin County Borough was 1·52 per 1,000.

DUBLIN REGISTRATION AREA.

BIRTHS.—The number of births registered in the Dublin Registration Area during the year 1929 was 11,724—5,980 boys and 5,744 girls—or 27·7 per 1,000 of the estimated population of the Registration Area, which consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire. The average rate for the preceding ten years was 27·5 per 1,000 of the mean population of those years.

* Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

Of the 11,724 births, 8,760 belonged to the city, affording a rate of 27·4 per 1,000 of the population, and 1,882 to the urban districts named above, equivalent to 18·1 per 1,000, and there were 1,082 births of infants whose mothers were admitted to institutions from localities outside the Registration Area. Corrected by the exclusion of the latter, the birth-rate for the entire Area in 1929 was 25·1 per 1,000 of the population.

Of the 11,724 births, 2,893 were registered during the first quarter, 2,986 in the second, 3,137 in the third, and 2,708 in the fourth.

DEATHS.—The number of deaths of residents of the Dublin Registration Area during the year 1929 was 6,878, equivalent to 16·2 per 1,000 of the population of the Area. The average death rate for the 10 years, 1919-28, was 16·8* per 1,000. Thus the rate for the last year is 0·6 per 1,000 below the average. The rate for the City of Dublin was 16·6 per 1,000, and for the urban districts 15·0 per 1,000.

The total number of deaths registered in the area during the year, namely, 7,470 (3,614 males and 3,856 females), is equal to 17·6 per 1,000 of the estimated population. The average rate for all the deaths registered during the preceding 10 years was 18·3 per 1,000. Of the 7,470 deaths in the entire area, 2,622 were registered during the first quarter of the year, 1,667 in the second, 1,510 in the third, and 1,671 in the fourth, the weekly average being 143.

CAUSES OF DEATH.

The records of last year show that the total number of deaths from the principal epidemic diseases† appertaining to the Dublin Registration Area was 365, affording a rate of 0·86 per 1,000 of the population, as compared with an average of 539 deaths and a rate of 1·30* per 1,000 for the ten years, 1919-28. (See Table 3.)

Deaths from *enteric fever* numbered 3, or 6 under the average for the preceding 10 years; deaths from *typhus*, one, the average being also one; deaths from *measles*, 3, or 90 below the average; deaths from *scarlet fever*, 8, or 12 below the average; deaths from *whooping cough*, 94, or one above the average; deaths from *diphtheria*, 65, or 18 above the average; deaths from *dysentery*, nil, the average being 5; deaths from *diarrhoea* and *enteritis* of children under 2 years of age amounted to 191, being 80 below the average; deaths from *influenza*, 225, or 26 above the average; deaths from *tuberculosis* numbered 752 (*pulmonary*, 595, *other forms*, 157), equivalent to a rate of 1·77 per 1,000 of the population, and were 109 (or 12·7 per cent.) below the average for the preceding 10 years; *cancer* caused 502 deaths, or 41 above the average, the rate per 1,000 of the population being 1·18; deaths from *pneumonia* numbered 675, being 6 above the average, and affording an annual rate of 1·59 per 1,000 of the population; *other respiratory diseases* caused 842 deaths, or 4 above the average, the rate per 1,000 of the population being 1·99.

Deaths caused by *violence* numbered 173, being 4 below the average for the 10 years preceding.

AGES AT DEATH.

Of the 6,878 deaths belonging to the Dublin Registration Area during the year, 1,546, or 22·5 per cent., were those of children under 5 years of age, and 2,065, or 30·0 per cent., were those of persons 65 years and upwards, including the deaths of 930 persons aged 75 years and upwards, of whom 59 (15 males and 44 females) were stated to be nonagenarians.

The rate represented by deaths of children aged one and under 5 years during the year 1929 was 13·3 per 1,000 of the population at that age-period as compared with an average of 17·8 for the 10 preceding years; the rate per 1,000 for deaths of children aged 5 and under 15 years was 2·6, and the average for the preceding 10 years, 3·3; for deaths of persons between 15 and 25 years, the rate per 1,000 was 4·3, the average rate for the preceding ten years being 4·8; among persons aged 25 and under 45 years the death rate was 6·9 per 1,000 of the population at these ages, as against an average of 7·7 per 1,000 for the preceding ten years; the rate for deaths of persons between 45 and 65 years was 25·2, as compared with an average of 22·8; deaths of persons aged 65 years and upwards were represented by a rate of 86·3 per 1,000, the corresponding average rate for the ten preceding years being 80·0 per 1,000.

* The rates for 1919-28 are not strictly comparable with those of 1929, as they are only partially corrected for deaths in Institutions. (See Tables 2 and 3.)

† See Note (*) on page 89.

INFANT MORTALITY.

For the Dublin Registration Area, the infant mortality rate (deaths of infants under one year of age per 1,000 births) in the year 1929 was 101. In 1928 it was 98, as compared with 115 in 1927, 114 in 1926, and 111 in 1925, and an average of 120 for the ten years 1919-1928. (See Table 3.)

In 1929 the infant mortality rate for the City of Dublin was 107 per 1,000; for Rathmines and Rathgar Urban District, 68; for Pembroke, 87; for Blackrock, 71; and for Dún Laoghaire, 70.

DEATHS IN PUBLIC INSTITUTIONS.

Of the 6,878 deaths, 3,099, or 45.1 per cent., occurred in public institutions, viz., 2053, in the various hospitals, prisons, and mental hospitals in the Area, 775 in the Dublin Union Workhouse, and 271 in institutions situated in other localities.

TABLE I.—Annual Rates per 1,000 of the population represented by the number of deaths registered from All Causes, from the Principal Epidemic Diseases* and from Tuberculous Disease, for Provinces, Counties, and County Boroughs in Saorstát Éireann, during the year ended 31st December, 1929. (*Corrected for Deaths in Institutions.*)

* See Note (*) on page 89.

† The rates for Saorstát Éireann, Dublin County and Dublin County Borough are calculated on the estimated population in the middle of 1929; those for the other areas on the population according to the Census of 1926.

ENGLAND AND SCOTLAND.

During the year 1929 the births in London were equivalent to a rate of 15.7 per 1,000 of the population; in Glasgow the birth-rate was 21.4 per 1,000, and in Edinburgh, 17.0 per 1,000.

The deaths among civilians in London during the same period were equivalent to an annual rate of mortality of 13.8 in every 1,000 of the civil population; in Glasgow the death-rate was 16.7 per 1,000 of the total population, and in Edinburgh the annual rate was 15.0 per 1,000.

URBAN DISTRICTS, 1929.

TABLE 2.—BIRTHS and DEATHS registered during the YEAR 1929 relating to the DUBLIN REGISTRATION AREA, and to the PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN; the number of deaths from each of the PRINCIPAL EPIDEMIC DISEASES†, from TUBERCULOUS DISEASE, from CANCER, and from VIOLENCE, and the number of Uncertified Deaths; also similar particulars regarding Belfast and Londonderry.

NOTE.—The Births shown for each District are exclusive of those in Institutions relating to persons admitted from other localities. The Deaths shown for each District are completely corrected for those occurring in Institutions; i.e., deaths in Institutions throughout Saorstát Éireann are assigned to the Districts in which deceased normally resided.

“The Dublin Registration Area” consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire. The 11 Principal Town Districts are marked thus (*)

† See note (*) page 89.

‡ The information given for Belfast and Londonderry has been kindly furnished by the Registrar-General for Northern Ireland and relates to the 52 weeks ended 28th December, 1929. The birth and death rates are based on the census population of 1926.

tion ; also, Mortality by certain Age-periods ; the Mean Temperature and Rainfall. (*The deaths shown for each year are exclusive of those in Institutions of persons belonging to other localities, and, in addition, those for 1927-9 include deaths of residents of the Area registered elsewhere in Saorstát Éireann.*)

[illegible]

* The figures for the years 1919-26 are derived directly from the Weekly Returns and thus only refer to periods of complete weeks. The figures for 1927-9 refer to the calendar years.

* The rates for the years 1919-25, 1927-29, are calculated on the population estimated to the middle of the respective years; those for 1926 on the population according to the Census of 1926. The rates for the years 1926-28 are calculated on the population estimated to the middle of the respective years; those for 1929 on the population according to the Census of 1929.

‡ The numbers for the year.
§ Rate per 1,000 births.

This arrangement was periodically necessary in order that the annual series might correspond with the calendar year. The numbers for the years 1919 and 1924 embrace the returns for 53 weeks. Rate per 1,000 births.

* Suspected cases,

NOTIFICATIONS OF INFECTIOUS DISEASES.

RETURNS of the number of cases of Infectious Diseases notified under the “Infectious Diseases (Notification) Act, 1889,” and the “Tuberculosis Prevention (Ireland) Act, 1908,” as furnished by the respective sanitary authorities, are set forth in the following table :—

TABLE 6.—Showing the NUMBER OF CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz. :—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dun Laoghaire), and in the Cities of Cork, Limerick, and Waterford, during the year 1929 (52 weeks). A dash (—) denotes that the disease in question is not notifiable in the district.

| CITIES AND URBAN DISTRICTS. | Population. Census, 1926 | Enteric Fever | Typhus. | Pyrexia. | Small-pox. | Measles. | Scarlet Fever. | Whooping-cough. | Diphtheria (including Membranous Croup). | Erysipelas. | Puerperal Fever. | Diarrhoeal Diseases. | Dysentery | Malaria. | Ophthalmia Neona- torum | Acute Primary Pneu- monia and Acute In- fluenzal Pneumonia. | Cerebro Spinal Fever. | Acute Poliomyelitis. | Encephalitis Lethargica. | Varicella. | Tuberculosis. | Total. |
|---|-----------------------------|---------------|---------|----------|------------|----------|----------------|-----------------|---|-------------|------------------|----------------------|-----------|----------|----------------------------|---|-----------------------|----------------------|-----------------------------|------------|---------------|----------|
| CITY OF DUBLIN ... | 316,693 | 15(a) | 1 | 7 | . | — | 430 | — | 500 | 55 | 11 | — | . | 1 | 6 | 256 | 3 | . | . | . | 818 | 2,103 |
| RATHMINES & RATHGAR URBAN DISTRICT ... | 39,984 | 3 | . | . | . | — | 49 | — | 60 | 5 | . | — | . | . | — | 3 | . | . | 3 | — | — | 123 |
| PEMBROKE URBAN DIST. | 33,383 | 3 | . | . | . | 3 | 25 | 23 | 61 | 2 | . | — | . | . | — | . | 1 | . | . | — | . | 118 |
| BLACKROCK URBAN DIST. | 9,934 | 2 | . | . | . | . | 7 | — | 9 | 1 | . | — | . | . | — | . | . | . | — | — | . | 19 |
| DUN LAOGHAIRE U.D. | 18,987 | 1 | . | . | . | — | 2 | — | 18 | . | . | — | . | . | — | . | — | . | — | — | . | 21 |
| CITY OF CORK ... | 78,490 | 6 | 1 | . | . | 215 | 215 | 1 | 368 | 23 | 6 | 78 | . | . | — | 7 | — | . | 2 | 79 | 207 | 1,209(b) |
| CITY OF LIMERICK ... | 39,448 | 5 | . | 1 | . | — | 99 | — | 28 | . | . | — | . | . | — | 1 | . | . | — | — | — | 134 |
| CITY OF WATERFORD | 26,647 | 1 | . | . | . | — | 29 | — | 6 | . | . | — | . | . | — | . | — | . | — | — | 3 | 39 |

(a) Including one case of para-typhoid fever.
(b) Including one case of epidemic rose rash.

TABLE 7.—Showing the NUMBER OF CASES of the undermentioned DISEASES treated during the YEAR 1929 (52 weeks), in the principal Dublin Hospitals in which cases of infectious diseases are received.

| DISEASES. | No. of Cases in Hospital at close of previous year. | No. admitted during year. | Discharged. | Died. | No. under treatment at close of period. |
|-------------------|---|------------------------------------|-------------|-------|--|
| Enteric Fever ... | 2 | 33 | 31 | 4 | . |
| Typhus ... | . | 2 | 1 | 1 | . |
| Small-pox ... | . | . | . | . | . |
| Measles ... | . | 25 | 25 | . | . |
| Scarlet Fever ... | 147 | 655 | 739 | 8 | 55* |
| Diphtheria ... | 41 | 858 | 769 | 61 | 69 |
| Pneumonia ... | 21 | 305 | 253 | 59 | 14 |

* Exclusive of 9 patients in Beneavin, the Convalescent Home of Cork Street Fever Hospital.
